# Cell Use Instruction - Klk1 Stable Expression Cell Line (RAW 264.7)

#### **Product Info**

Catalog	YOE-L110					
Cell line	Klk1 Stable Expression Cell Line (RAW 264.7)	Morphology	monocyte/macrophage,ad herent			
Gene Name	Klk1	Passage ratio	1:2-1:3			
Culture method	90%DMEM+10%FBS  Ubigene didn't use P/S. But client could use P/S after cells grow in good condition after thawing.					
Cryopreservation solution	50%DMEM+40% FBS+10%DMSO					
Antibiotic concentration for maintenance	Puro=4μg/mL  Note: To maintain stable expression selection during optimal growth of	3	nintain cells under antibiotic			
Special Note	Cells cannot be digested with trypsin. Cells need to be digested by gently pipetting into single cells.					
Plasmid Backb	one Map

#### (2) CT value

No.	Sample	mKlk1-1 Ст Mean	Q-mGAPDH Ст Mean	ΔCτ Mean	ΔΔСτ	Expression Rate
1	Klk1 Stable Expression Cell Line (RAW 264.7)	23.030	15.190	7.840	- 14.573	24373.064
2	RAW264.7_Ctrl(Puro)	38.422	16.009	22.413	0.000	1.000

#### (3) Melt curve

Klk1 Stable Expression Cell Line (RAW 264.7)+mKlk1-1 melt curve

Klk1 Stable Expression Cell Line (RAW 264.7)+Q-mGAPDH melt curve

RAW264.7 Ctrl(Puro)+mKlk1-1 melt curve

RAW264.7\_Ctrl(Puro)+Q-mGAPDH melt curve

### (4) Gene Expression

Tel: +86 153 6067 3248(Int'l) US Toll free: 855 777 3210 EU Toll free: 800 3272 9252 Korea Toll free: 001 800 3272 9252

#### (5) Conclusion

Compared with RAW264.7 Ctrl(Puro), the expression rate of Klk1 Stable Expression Cell Line (RAW 264.7) cell line was 2437306.4%, The generation of stable Klk1overexpression cell line was successful.

## **Cell Reception**

#### Cryopreserved cells:

In the case of cryopreserved cells transported with dry ice, upon received, immediately transfer to liquid nitrogen for storage or store briefly at -80°C freezer, or proceed directly to cell thawing. Upon cell thawing, please count the cell number and cell viability and take some photos of the cells under different magnification (e.g. at 100x and 40x) as the records.

Notice: Upon received, please ensure to takes photos of the package, including dry ice and the tubes, and contact us within 24 hrs if any abnormalities such as dry ice has ran out, the cap of the cryovial is dislodged, broken and the cell is contaminated.

#### **Cell Thawing**

- 1) Preparation: warm up the complete culture medium in 37°C water bath for 30 mins. Transfer the cryopreserved vial from liquid nitrogen to - 80°C freezer, and leave for several minutes to volatilize residual liquid nitrogen;
- 2) Inside the ultra-clean bench, pipet 6-7 mL of complete medium into a 15 mL centrifuge tube;
- 3) Take out the cryopreserved vial from 80°C freezer and leave in dry ice temporarily, shake slightly before thawing to remove residual dry ice and liquid nitrogen. Then hold the cap with forceps, quickly thaw cells in a 37°C water bath by gently swirling the vial (Note: keep the cap out of the water). In about 1 minute, it would completely thaw;
- 4) Inside the ultra-clean bench, sterilize the outer surface of the vial by wiping with an alcohol cotton pellet and leave it to dry. Transfer the thawed cells to the prepared centrifuge tube (step 2) by pipette, close the lid, and centrifuge at 1100 rpm for 4 mins at room temp to collect the cells;
- 5) Inside the ultra-clean bench, carefully remove and discard the supernatant. Resuspend cell pellet with 1mL of fresh complete medium and then transfer to a T25 flask (or 6 cm culture dish) containing 4 mL of complete medium, label the flask with cell name, date and passage no., incubate 3) UBIGENE the flask in a 37°C, 5%CO2 incubator.

Note: Please do not thaw the cells directly to a T75 flask or 10 cm culture dish.

## **Cell Passaging**

1) Cells need to be passaged daily. During cell passaging, inside the ultra-clean bench, gently pipet the cells into single cells (be sure to observe all cells not in clumps, and into single cells under the

Tel: +86 153 6067 3248(Int'l) US Toll free: 855 777 3210 EU Toll free: 800 3272 9252

Korea Toll free: 001 800 3272 9252

microscope);

- 2) Transfer the cell suspension into a 15 mL or 50 mL centrifuge tube, cells from same batch can be collected and put together, then put the cap and label;
- **3** UBIGEN 3) Centrifuge at 1100 rpm for 4 mins at room temp. After centrifugation, remove and discard the supernatant and resuspend the cells with 2 mL of complete medium;
- 4) Cells need to be passaged at appropriate passage ratio, 1:2 for the first passage.

### **Cell cryopreservation**

- 1) Same as procedures of cell passaging, inside the ultra-clean bench, digest the cells to a single-cell suspension, and terminate digestion by adding complete medium. All liquid is transferred to a 50 mL centrifuge tube;
- 2) Mix well by pipetting and take 20 µL for cell counting;
- 3) Centrifuge at 1100 rpm for 4 mins at room temp. After centrifugation, remove and discard the supernatant, and resuspend the cells with 1-2 mL of 4°C pre-cooled cryopreservation medium (use the one you usually use in lab, or any commercial cryopreservation solutions are fine), then add cryopreservation medium to adjust to the required density (1x10<sup>6</sup>-1x10<sup>7</sup>cells/mL);
- 4) Aliquot the cell suspension to cryovials as 1 mL/tube, close the lid tightly, and the cryovials should be labeled with the cell name, source, cell passage number, and date of cryopreservation in advance;
- 5) Place the cryovials in 4°C pre-cooled Freezing Container, then put the container in -80°C freezers within 15 mins after cell cryopreservation;

Korea Toll free: 001 800 3272 9252

6) Stay overnight, transfer the cryovials to liquid nitrogen for long-term storage.
